

Demo Atmospheric Nitrogen Deposition Report

Farm: Nông trại Phú Điền

Plot: Lô A1 - Đậu nành / Lúa Hè

Season: 2026 - Vụ Lúa Hè

Season ID: 19

Plot ID: 1

Record type: Nutrient Input Event

Input source: ATMOSPHERIC_DEPOSITION

Observation date: 2026-05-02

Evidence reference: LAB-FDN-ATM-260502

Measured: TRUE

Data source: lab_measured

Source type: LAB_MEASURED

Nitrogen amount: 2.0000 kg N

Observation context: Regional atmospheric nitrogen deposition during the active rice season.

Agronomic interpretation:

This record documents the measured nitrogen contribution from atmospheric deposition. The value is relatively small compared with fertilizer sources, but it is

still included to make the nitrogen balance more complete. Because this contribution is measured and documented, the backend does not need to use a default estimate for this source.

Note:

Happy path: dùng số đo thực tế từ báo cáo lắng đọng khí quyển theo khu vực.
