

Demo Mineral Nitrogen Application Report

Farm: Nông trại Phú Điền

Plot: Lô A1 - Đậu nành / Lúa Hè

Season: 2026 - Vụ Lúa Hè

Season ID: 19

Plot ID: 1

Record type: Nutrient Input Event

Input source: MINERAL_FERTILIZER

Application date: 2026-04-25

Evidence reference: LAB-FDN-MINERAL-260425

Measured: TRUE

Data source: lab_measured

Source type: LAB_MEASURED

Nitrogen amount: 10.0000 kg N

Application context: Reduced mineral nitrogen application after a soybean rotation.

Agronomic interpretation:

This record documents the mineral fertilizer nitrogen applied to the 2026 summer rice season. The nitrogen amount is intentionally low because the previous legume season contributed soil nitrogen legacy. This supports the Happy Path scenario

where the farm reduces dependency on synthetic nitrogen input while maintaining crop performance.

Note:

Happy path: giảm mạnh N vô cơ cho lúa nhờ di sản đạm sau vụ đậu nành.
