

Demo Seed Certificate and Nitrogen Import Record

Farm: Nông trại Phú Điền

Plot: Lô A1 - Đậu nành / Lúa Hè

Season: 2026 - Vụ Lúa Hè

Season ID: 19

Plot ID: 1

Record type: Nutrient Input Event

Input source: SEED_IMPORT

Sowing / seed record date: 2026-04-20

Evidence reference: CERT-FDN-SEED-260420

Measured: TRUE

Data source: user_entered

Source type: USER_ENTERED

Nitrogen amount from seed import: 1.0000 kg N

Seed context: Rice seed used for the 2026 summer rice season.

Agronomic interpretation:

This record documents the nitrogen contribution associated with seed input.

Although the value is small, recording it helps the system build a complete nitrogen

input profile. Because this value is entered with supporting evidence, the system does not need to fall back to a default seed nitrogen estimate.

Note:

Happy path: hồ sơ giống được nhập đủ để không phải dùng default seed import.
