

Demo Soil Test Report

Farm: Nông trại Phú Điền

Plot: Lô A1 - Đậu nành / Lúa Hè

Season: 2026 - Vụ Lúa Hè

Season ID: 19

Plot ID: 1

Record type: Soil Test

Sample date: 2026-05-06

Lab reference: LAB-FDN-SOIL-260506

Measured: TRUE

Source type: LAB_MEASURED

Soil organic matter: 3.9000 %

Mineral N: 8.0000 kg/ha

Nitrate: 18.0000 mg/kg

Ammonium: 5.0000 mg/kg

Legacy nitrogen contribution: 20.0000 kg N

Legacy derived: FALSE

Agronomic interpretation:

This soil test confirms that the plot still contains a meaningful nitrogen legacy after the previous soybean season. The measured organic matter and mineral nitrogen values support the Happy Path story: the farm can reduce mineral fertilizer input because the soil already carries residual nitrogen benefits from legume rotation.

Note:

Happy path: xác nhận soil legacy sau vụ đậu nành season 18, giúp giảm nhu cầu đạm hóa học ở season 19.
